

# bioBOOST Commercial Soil Amender

## Product Description

BioBOOST is our dynamic, environmentally sustainable compost-based amender made with high-grade, Class-A biosolids and aged forest fines. This 3/16" screened compost is very effective in low concentrations due to its highly available nutrient content.

Jet black in color, bioBOOST is an excellent topdressing for sport fields, golf courses, and residential lawns and gardens. It's a proven effective additive to sand and native soils, and we blend it with USGA spec sand to create our premium quality, sand-based RootZone.

## Product Features

### Core Benefits

- Finely screened 3/16" product ideal for topdressing
- Highly effective in low concentrations
- Environmentally sustainable
- Jet black color

### Components

- Aged Forest fines
- Class A biosolids

## Product Guidelines

### Usage and Applications

- Sports field topdressing
- Golf course topdressing
- Residential Lawn and Garden Topdressing
- Effective and proven additive to sand and native soils
- Used in our Rootzone for sport field construction

### Installation Tips and Recommendations

- For existing lawns, spread a 6 mm (1/4") layer over the area with a rake
- For garden beds, blend a 50 mm (2") layer into existing soil
