

**Product Description**

Veratec's Thrive organic compost is unparalleled in terms of quality, consistency, workability, and sustainability. The compost material comes from the world-class Surrey Biofuel facility.

State-of-the-art systems control temperature, pressure, and humidity in the enclosed composting tunnels, resulting in ideal conditions for microorganisms to complete the composting process.

This results in high-quality closed loop, dry compost. It is tested regularly to meet federal (CCME) and provincial (OMMR) standards.

**Product Features**

**Core Benefits**

- Sustainable organic re-use
- Workability factor is extremely high
- Cost-effective for commercial projects
- Promotes healthy root growth and fortifies soil fertility
- Adds essential nutrients to soil

**Components**

- Compost made from:
  - green waste (80%) and
  - food waste (20%)

*May contain small bits of non-toxic impurities (i.e. plastic bits from curbside greenwaste)*

**Product Guidelines**

**Usage and Applications**

- Ideal for use as a soil amendment
- Bedding for animals
- Enhance low quality soil with increased organic matter and aeration
- Suited to commercial projects

**Installation Tips and Recommendations**

- Blend THRIVE organic compost into existing soil
