

Product Description

Veratec's Thrive planter blend is unparalleled in terms of quality, consistency, workability, and sustainability. The compost material comes from the world-class Surrey Biofuel facility.

State-of-the-art systems control temperature, pressure, and humidity in the enclosed composting tunnels, resulting in ideal conditions for microorganisms to complete the composting process.

This results in high-quality closed loop, dry compost. It is tested regularly to meet federal (CCME) and provincial (OMMR) standards. We blend it with clean, free-draining river sand to produce top quality planter growing medium.

Product Features

Core Benefits

- Sustainable organic re-use
- Workability factor is extremely high
- Cost-effective for commercial projects
- Promotes healthy root growth and fortifies soil fertility
- Ideal for acidic BC soils

Components

- Compost made from:
 - green waste (80%) and
 - food waste (20%)
- River sand

May contain small bits of non-toxic impurities (i.e. plastic bits from curbside greenwaste)

Product Guidelines

Usage and Applications

- Top quality commercial grade planter projects
- Ideal for on-slab applications
- Enhance low quality soil with increased organic matter and aeration
- Suited to commercial projects

Installation Tips and Recommendations

- For gardens, install THRIVE planter blend at 450 mm deep
