

Product Description

Veratec's natural THRIVE organic compost has been developed for Agricultural applications and is unparalleled in terms of quality, consistency, workability, and sustainability. The material comes from a modern world-class compost facility which produces top grade green (80%) / food (20%) waste, dry, 1/2" minus lightweight humus with NO biosolids, NO manure, and NO wood.

State-of-the-art systems control temperature, pressure, and humidity in a fully closed-loop, negative pressure composting process, resulting in ideal conditions for beneficial microorganisms to complete the composting.

This results in a professional, high-quality, dry Class-A compost that is tested regularly to meet strict federal (CCME) and provincial (OMMR) standards.

Product Features

Core Benefits

- Sustainable natural organic correction & nutrient rich structural humus amendment
- High workability factor
- Cost effective for agriculture
- Promotes healthy root growth and fortifies soil fertility
- Add essential stable release elements and beneficial organisms
- Less water and chemical fertilizer required - Lower farming costs
- Higher, longer plant nutrient uptake
- Increased crop yields, profitability

Product Guidelines

Usage and Applications

Broadcast, spread, or till THRIVE organic compost fertilizer into soil. Ideal for use as a soil structural builder and natural fertilizer to enhance low quality soil with increased nutrients, organic matter, and aeration for stronger, healthier plants. Well suited to horticulture, viticulture, and commercial agriculture.
