

Product Description

The number one choice for landscape professionals, ProSOIL is our nutrient-rich, recycled organic compost soil. The perfect foundation for thriving plants and turf, ProSOIL is manufactured with our unique, small-batch blending process to ensure the highest level of quality and consistency. Made with free-draining river sand, aged mushroom compost, and black bark fines (planter blend), ProSOIL is the only compost-based soil free from plastic particles that can sometimes end up in compost from recycling programs.

ProSOIL is the environmentally sustainable choice for lush lawns and vibrant ornamental flowers. It's low maintenance, free-draining, and requires less fertilizer and herbicides. Ideal for retail garden centres and residential and commercial planters, trees, shrubs, turf, and lawn spaces. ProSOIL is available throughout Western Canada at landscape centres and nurseries.

Product Features

Core Benefits

- Environmentally sustainable
- Double-screened to minimize woody debris
- Lightweight, free-draining and easy to work with
- Effective, proven product

Components

- Free-draining river sand
