

Product Description

Enhance the durability, health, and overall performance of your natural grass field with ROOTzone, a precision blend of our 3/16" bioBOOST and USGA spec sand. ROOTzone is designed to provide excellent drainage, while maintaining an optimal moisture profile and CEC levels to promote establishment and vigorous growth of new grass. This high-performance material resists compaction and achieves the perfect balance of aeration and capillary porosity essential for healthy turf.

ROOTzone requires less ongoing maintenance, allowing you to save on maintenance costs while increasing your hours of play. It's ideal for natural grass sports field construction, high traffic lawns, and natural turf topdressing.

Product Features

Core Benefits

- Optimum drainage
- Highly resistant to compaction
- Vigorous grow in period
- Increased nutrient and water holding capacity
- Lower field establishment costs
- Lower ongoing maintenance costs
- Enhances durability, health, and overall performance of natural grass fields

Components

- 3/16" BioBoost
- 3mm USGA Sand

Product Guidelines

Usage and Applications

- Natural turf grass sport field construction
- Putting green construction
- High traffic lawns
- Natural turf topdressing

Installation Tips and Recommendations

- Install per project specifications
